Lessons Learned ~ Success from the DM932 Oil Spill

On the morning of July 23, 2008, T/S TINTOMARA collided with American Commercial Lines T/B DM932, near downtown New Orleans, Louisiana. Initial reports were that the spill was over 380,000 gallons of #6 fuel oil. The volume was later reduced to 270,000 gallons when one tank was found to be undamaged during the salvage and lightering process. Following the discharge, a Unified Command was established. Response assets consisted of over 108 work boats, 6 barges, 35 skimmers, 14 vacuum trucks and 5 Oil Spill Removal Organizations(OSRO), with personnel totaling over 1,789 on scene (1). These tactical resources were deployed over 110 river miles of the Mississippi River, which presented the daunting task of tracking response resources juxtaposed to changing response priorities and tactics. As shoreline impact was assessed and cleanup priorities evaluated, Command and General Staff needed a strong, agile method to manage tactical resources throughout the area of operations...[Read More»](#)

Swine Flu Prevention Advice from the Experts

"There is a huge difference between preparedness and paranoia", says Dr. Robert Emery, occupational health expert at the UT School of Public Health at Houston. "Although we're dealing with a new strain of flu, a set of universally applicable preventive measures exist that can be employed right away by everyone to help stop the spread of this disease..."

Bills to Spur Marine Energy Development Introduced in Congress

Legislation introduced last week by members of the House of Representatives and the Senate could spur development of U.S. marine and hydrokinetic energy resources—a sector in which the U.S. has lagged behind other countries. Rep. Jay Inslee (D-Wa.) introduced the Marine Renewable Energy Promotion Act of 2009 in the House, as Sen. Lisa Murkowski (R-Alaska) proposed a related bill in the Senate. The act and a companion tax provision would provide \$250 million to expand federal research of marine energy...[Read More»](#)
